

What is “Kinon®”?

Kinon® is a proprietary hand cast resin with various applied decorative effects. **Kinon®** material is cast in several different layering processes directly onto a flat MDF surface. As it cures, the material forms a solid structural bond with the MDF, producing a stable composite material.

Kinon® is a tough, chemically resistant material and is therefore ideal for various interior furnishing and decorative applications such as wall paneling, doors (both cabinetry and interior), kitchens, retail fixtures and furniture to include cabinetry, tables etc. It is widely specified for residential, retail, hospitality and other commercial projects.

Kinon® offers a variety of product sizes, which are listed in the website - www.kinon.com. The maximum size offered is 5' x 12'. The typical thicknesses of the MDF sheets are ½" or ¾". To make the material flexible for applications on curved surfaces **Kinon®** offers planed down material at 1/4 " or 1/8 " thickness (1/8" for maximum flexibility).

All **Kinon®** products are flame-retardant, abrasion resistant, and routinely tested to meet industry standards.

Kinon® products have been sold worldwide for over ten years. All testing provided is through independent laboratories to meet state, national and various international requirements. These test results may be found in the website www.kinon.com.
